ELSEVIER

SUBJECT INDEX FOR VOLUME 7

A

Ablation, and embryonic stem cell cardiogenesis 63
Acoustics, and ultrasonography 168
Actin, tropomyosin interaction with 124
Action potential, and K^+ channels 118
Activation, and phosphatidylinositol 3-kinase in myogenesis 198
Acto-myosin, tropomyosin interaction with 124
Adaptor proteins, and Eph family receptors and ligands 329
Adenovirus, and gene transfer strategies 145
Adenovirus, and kallistatin in blood pressure regulation 307
Adhesion, and Bernard-Soulier syndrome 239
Adhesion, and PECAM-1/CD31 203
Adhesion, and plasminogen activators 227
Adipocytes, and caveolae 103
Adrenergic receptors, overview of 137
Advanced glycosylation endproducts (AGEs), and lipoprotein modification 39
Allotransplantation, protein C/protein S/thrombomodulin anticoagulant pathway in 174
Amino acids, and kallistatin in blood pressure regulation 307
Amino acids, and plasma carboxypeptidases in plasminogen system regulation 71
Aminoguanidine, and advanced glycosylation endproducts 39
Anesthetics, and malignant hyperthermia domain 312
Angiocardiography, and arrhythmogenic right ventricular cardiomyopathy 84
Angiogenesis, ischemia-driven 289
Angiogenesis, and thrombosis in cancer 52
Angiogenic response, and Eph family receptors and ligands 329
Angiotension II, and signaling pathways 151
Animal husbandry, and transgenesis (Tutorial) 185
Animal models, of heart failure 161
Antiarrythmic drugs, and mechanisensitive ion channels 4
Anticoagulants, and tissue factor-dependent coagulation 316
Apolipoprotein E (ApoE), and thrombin-antithrombin II complexes 9
Apoptosis, and arrhythmogenic right ventricular cardiomyopathy 84
Apoptosis, and congestive heart failure 249
Apoptosis, ordering multiple pathways of 294
Apoptosis, and phosphatidylinositol 3-kinase in myogenesis 198
Arrhythmias, stretch-induced 4
Arrhythmogenic right ventricular cardiomyopathy 84
Arterial injury, and restenosis 90
Arterial lumen, and stenting 24
Assembly, and Eph family receptors and ligands 329
Atherosclerosis, and advanced glycosylation endproducts 39
Atherosclerosis, and blood flow dynamics 111
Atherosclerosis, and bypass graft failure 111
Atherosclerosis, and congestive heart failure 249
Atherosclerosis, and endothelial nitric oxide synthase 28
Atherosclerosis, and gender 94
Atherosclerosis, and macrophage foam cell necrosis 256
Atherosclerosis, and NADH/NADPH oxidase 301
Atherosclerosis, and ultrasonography 168
Athletes, and arrhythmogenic right ventricular cardiomyopathy 84
Atrophy, and arrhythmogenic right ventricular cardiomyopathy 84
Autocrine loop, and Eph family receptors and ligands 329
Autosomal dominance, and arrhythmogenic right ventricular cardiomyopathy 84

B

Balloon angioplasty, restenosis after 90
Balloon-injury models, and gender 94
Bernard-Soulier syndrome 239
β-adrenergic stimulation, and signaling pathways 151
Binding, and GATA-4/5/6 in regulation of cardiac gene expression 75
Binding, and plasma carboxypeptidases in plasminogen system regulation 71
Binding, and plasminogen activators 227
Binding, and tropomyosin 124
Biophysical analysis, and ion channel proteins 211
Biopsy, endomyocardial 84
Blastocyst, preimplantation 63
Blood coagulation, and plasminogen activator inhibitor 1 47
Blood coagulation, and tissue factor pathway inhibitor 234
Blood flow dynamics, and atherosclerosis 111
Blood pressure, and endothelial nitric oxide synthase 28
Blood pressure, kallistatin in regulation of 307
Blood vessels, formation of 271
Blood vessels, and ischemia-driven angiogenesis 289
Blood vessels, and PECAM-1/CD31 203
Body temperature increase, and malignant hyperthermia domain 312
Brain, and endothelial nitric oxide synthase 28
Bypass graft failure, and atherosclerosis 111

C

Ca^{2+}, and tropomyosin 124
Ca^{2+} release channel, and malignant hyperthermia domain 312
Cancer, thrombosis and angiogensin in 52
Candidate-gene mutational analyses, and idiopathic dilated cardiomyopathy 60
Capillary growth, and ischemia-driven angiogenesis 289
Capillary-like structures, and Eph family receptors and ligands 329
Carboxipeptidases, plasma 71
Cardiac output, and congestive heart failure 249
Cardiogenesis, and TEF transcription factors 192
Cascades, and phosphatidylinositol 3-kinase in myogenesis 198

© 1997, Elsevier Science Inc., 1050-1738/97/$17.00 PII S1050-1738(97)00118-7

Cascades, and thrombosis and angiogenesis in cancer 52
Catheter systems, balloon 90
Caveolae, and endothelial nitric oxide synthase 28
Caveolae, molecular and celular biology of 103
Cell assembly, Eph family receptors and ligands in 329
Cell culture, and GATA-4/5/6 in regulation of cardiac gene expression 75
Cell differentation, and blood vessel formation 271
Cell differentation, and embryonic stem cell cardiogenesis 63
Cell differentation, and GATA-4/5/6 in regulation of cardiac gene expression 75
Cell fusion, and phosphatidylinositol 3-kinase in myogenesis 198
Cell migration, and Eph family receptors and ligands 329
Cell migration, and plasma carboxypeptidases in plasminogen system regulation 71
Cell migration, and plasminogen activators 227
Cell motility, and phosphatidylinositol 3-kinase in myogenesis 198
Cell proliferation, and phosphatidylinositol 3-kinase in myogenesis 198
Cell-cell borders, and PECAM-1/CD31 203
Cellular receptors, for plasmingen activators 227
Children, growth hormone-deficient 264
Cholesterol, free 256
Cholesterol, and gender 94
Cholesteryl ester, in remodeling of plasma high density lipoproteins 218
Chromosome 1q42-q43, and arrhythmogenic right ventricular cardiomyopathy 84
Chromosomes, and idiopathic dilated cardiomyopathy 60
Circulatory congestion, and animal models of heart failure 161
Clearance mechanisms, and advanced glycosylation endproducts 39
Clearance receptor, and thrombin-antithrombin II complexes 9
Cloning, and ion channel proteins 211
Cloning, and phosphatidylinositol 3-kinase in myogenesis 198
Clots, and thrombosis and angiogenesis in cancer 52
Coagulation, tissue factor-dependent 316
Collateral blood vessels, and ischemia-driven angiogenesis 289
Combinatorial arrays, of transcription factors 192
Compensatory angiogenesis, metabolic consequences of 289
Compressibility, and ultrasonography 168
Congestive heart failure, and cell death 249
Connective tissue, and fibrillin-1 282
Conservation, and apoptosis 294
Contractile activity, and tropomyosin 124
Contractile proteins, and cardiac hypertrophy 249
Copy DNA (cDNA), and Bernard-Soulier syndrome 239
Core, necrotic 256
Cysteine mutagenesis, in voltage-dependent Na^+ channel 211
Cytoskeleton, and Bernard-Soulier syndrome 239
Cytoskeleton, and phosphatidylinositol 3-kinase in myogenesis 198
Cytotoxicity, and apoptosis 294
Cytotoxicity, free cholesterol-induced 256

D

Death pathways, multple stimuli initiating 294
Density, mass 168
Density, vascular 289
des-1,3-IGF-1, and phosphatidylinositol 3-kinase in myogenesis 198
Development, and apoptosis 294
Development, and retinoid signaling 324
Development, and TEF transcription factors 192
Developmental paradigms in disease (Editorial) 1
Diabetes, and advanced glycosylation endproducts 39
Diabetes, and blood vessel formation 271
Diabetes, and congestive heart failure 249
Diabetes, and endothelial nitric oxide synthase 28
Dilatation, of left ventricle 249
Dilated cardiomyopathy, idiopathic 60
Dilation, and animal models of heart failure 161
DNA-binding domains, and TEF transcription factors 192
DNA-binding transcription factors, and GATA-4/5/6 in regulation of cardiac gene expression 75
DNA damaging agents, and apoptosis 294
DNA transfer, to significant part of myocardium 145
Docking sites, and caveolae 103
Domains, and endothelial nitric oxide synthase 28
Domains, and Eph family receptors and ligands 329
Domains, and malignant hyperthermia 312
Domains, and TEF transcription factors 192
Domains, and transgenesis (Tutorial) 185
Down-regulation, and transgenesis (Tutorial) 185
Downstream elements, and phosphatidylinositol 3-kinase in myogenesis 198
Downstream signaling proteins, and Eph family receptors and ligands 329
Drug delivery, local 90, 245
Drug development, and embryonic stem cell cardiogenesis 63

E

Echocardiography, in vivo 129
Ectopia lentis, dominant 282
Ectopic protein isoform, and transgenesis (Tutorial) 185
Electrical instability, and arrhythmogenic right ventricular cardiomyopathy 84
Electrocardiography, and arrhythmogenic right ventricular cardiomyopathy 84
Embryogenesis, blood vessel formation during 271
Embryogenesis, and GATA-4/5/6 in regulation of cardiac gene expression 75
Embryogenesis, and retinoid signaling 324
Embryonic stem cell cardiogenesis, applications 63
End-stage heart failure, and animal models of heart failure 161
End-stage heart failure, and cardiac myocyte loss 249
Endocrine therapy, in cardiology 264
Endocytosis, mediation of 234
Endomyocardial biopsy, and arrhythmogenic right ventricular cardiomyopathy 84
Endothelial cells, and blood vessel formation 271
Endothelial cells, and caveolae 103
Endothelial cells, and nitric oxide synthase 28
Endothelial cells, and PECAM-1/CD31 203
Endothelial cells, and thrombosis and angiogenesis in cancer 52
Endothelial transcytosis, and caveolae 103
Endothelium-dependent relaxation, and NADH/NADPH oxidase 301
Endovascular prosthesis, for prevention of restenosis 245
Enflurane, and malignant hyperthermia domain 312
Engineering, and embryonic stem cell cardiogenesis 63
Enhancers, and TEF transcription factors 192

© 1997, Elsevier Science Inc.,
1050-1738/97/$17.00 PII S1050-1738(97)00118-7

Environmemtal stress, and ischemia-driven angiogenesis 289
Enzyme-linked immunosorbent assay (ELISA), and advanced glycosylation endproducts 39
Eph family receptors and ligands, in vascular targeting and cell assembly 329
Epithelial cells, and caveolae 103
Essential excitability proteins, overview of 211
Estrogen replacement therapy, and cardiovascular disease 94
Etiology, and animal models of heart failure 161
Evolutionarily conserved elements, and apoptosis 294
Extracellular matrix, degradation and remodeling of 227
Extracellular matrix, and fibrillin-1 282
Extracellular stimuli, and phosphatidylinositol 3- kinase in myogenesis 198

F

Familial occurrence, and arrhythmogenic right ventricular cardiomyopathy 84
Fas ligand receptor, and apoptosis 294
Fibrillin-1, badly engineered 282
Fibrin, dissolution of 227
Fibrin, and plasma carboxypeptidases in plasminogen system regulation 71
Fibrin, and thrombosis and angiogenesis in cancer 52
Fibroblasts, and caveolae 103
Fibro-fatty infiltration, and arrhythmogenic right ventricular cardiomyopathy 84
Filaments, and tropomyosin 124
Filling, and mechanisensitive ion channels 4
Foam cells, macrophage 256
Free cholesterol-induced cytotoxicity 256
Free oxygen species, and advanced glycosylation endproducts 39

G

GATA-4/5/6, regulation of cardiac gene expression by 75
Gender, and cardiovascular disease 94
Genes, and adrenergic receptors 137
Genes, and Bernard-Soulier syndrome 239
Genes, and blood vessel formation 271
Genes, and embryonic stem cell cardiogenesis 63
Genes, and fibrillin-1 282
Genes, and idiopathic dilated cardiomyopathy 60
Genes, and K^+ channels 118
Genes, and kallistatin in blood pressure regulation 307
Genes, and malignant hyperthermia domain 312
Genes, and pathogenic mtDNA mutations 16
Genes, and PECAM-1/CD31 203
Genes, and protein C/protein S/thrombomodulin anticoagulant pathway 174
Genes, and TEF transcription factors 192
Genes, and thrombosis and angiogenesis in cancer 52
Genes, and transgenesis overview (Tutorial) 185
Genes, and tropomyosin 124
Gene-targeted mice, and gene transfer strategies 145
Gene-targeted mice, and in vivo echocardiographic assessment of left ventricular function in 129
Genetic heterogeneity, and arrhythmogenic right ventricular cardiomyopathy 84
Gene transfer strategies, for augmenting cardiac function 145
Glycerophosphatidylinositol (GPI), and Eph family receptors and ligands 329
GpIb-V-IX receptor, and Bernard-Soulier syndrome 239
G proteins, and adrenergic receptors 137
G proteins, and caveolae 103
Graft rejection, and protein C/protein S/thrombomodulin anticoagulant pathway 174
Growth hormone (GH), in endocrine therapy 264

H

Halothane, and malignant hyperthermia domain 312
Heart rate, and mechanisensitive ion channels 4
Hematopoiesis, and GATA-4/5/6 in regulation of cardiac gene expression 75
Hemorrhage, and plasminogen activator inhibitor 1 47
Hemostasis, and Bernard-Soulier syndrome 239
Heparin, and plasminogen activator inhibitor 1 47
Hereditary long QT syndrome, and K^+ channels 118
Heterophilic interactions, and PECAM-1/CD31 203
High-density lipoprotein (HDL), plasma 218
High-resolution imaging, of cardiovascular system 168
Hippocampus, and endothelial nitric oxide synthase 28
Homeostasis, and apoptosis 294
Homeostasis, and endothelial nitric oxide synthase 28
Homophilic interactions, and PECAM-1/CD31 203
Homozygous defect, and plasminogen activator inhibitor 1 47
Hormones, and retinoid signaling 324
H-Ras, and caveolae 103
Hybrid stent, for prevention of restenosis 245
Hydrophobicity, and ion channel proteins 211
Hypercholesterolemia, and gender 94
Hyperplasia, neointimal 90
Hypersensitivity, and K^+ channels 118
Hypertension, and animal models of heart failure 161
Hypertension, and congestive heart failure 249
Hypertension, and endothelial nitric oxide synthase 28
Hypertension, and NADH/NADPH oxidase 301
Hypertrophy, cardiac 249
Hypertrophy, secondary cardiac 161
Hypertrophy, vascular smooth muscle 301
Hypoferremia, and ischemia-driven angiogenesis 289
Hypoglycemia, and ischemia-driven angiogenesis 289
Hypoxia-inducible transcription, and ischemia-driven angiogenesis 289

I

Immunobiology, protein C/protein S/thrombomodulin anticoagulant pathway in 174
Immunoglobulin gene superfamily, and PECAM-1/CD31 203
Inflammatory response, and blood vessel formation 271
Inflammatory response, and PECAM-1/CD31 203
Inflammatory response, and protein C/protein S/thrombomodulin anticoagulant pathway 174
Inheritance, arrhythmogenic right ventricular cardiomyopathy 84
Inheritance, Bernard-Soulier syndrome 239
Inheritance, Marfan syndrome 282
Inhibition, and thrombin-antithrombin II complexes 9
Inhibition, and tissue factor-dependent coagulation 316
Inotropic effects, positive 151
In situ differentiation, of endothelial cells 271
Insulinlike growth factor 1 (IGF-1), and endocrine therapy 264
Insulinlike growth factor 1 (IGF-1), and phosphatidylinositol 3-kinase in myogenesis 198

© 1997, Elsevier Science Inc., 1050-1738/97/$17.00 PII S1050-1738(97)00118-7

Insulinlike growth factor II (IGF II), and phosphatidylinositol 3-kinase in myogenesis 198
Integrins, and PECAM-1/CD31 203
Integrins, and plasminogen activators 227
Interaction trap approaches, and Eph family receptors and ligands 329
Intracoronary stent, for prevention of restenosis 245
In vivo echocardiography, of left ventricular function 129
Ion channels, stretch-activated 4
Ischemia, and blood vessel formation 271
Ischemia-driven angiogenesis 289

K

K^+ channels, in health and disease 118
Kallistatin, in blood pressure regulation 307
Kidney microvasculature, and Eph family receptors and ligands 329
Kir genes, and K^+ channels 118
Kv genes, and K^+ channels 118

L

L6E9 myoblasts, and phosphatidylinositol 3-kinase in myogenesis 198
LDL receptor-related protein, and thrombin- antithrombin II complexes 9
Left ventricular dysfunction, and congestive heart failure 249
Left ventricular dysfunction, in vivo echocardiographic assessment of 129
Leukocytes, and PECAM-1/CD31 203
Ligand-dependent *trans*-activators, and retinoid signaling 324
Ligands, and apoptosis 294
Ligands, and endothelial nitric oxide synthase 28
Ligands, Eph family 329
Ligands, and plasminogen activators 227
Ligands, and thrombin-antithrombin II complexes 9
Linkage analysis, and arrhythmogenic right ventricular cardiomyopathy 84
Linkage analysis, and idiopathic dilated cardiomyopathy 60
Lipids, and endothelial nitric oxide synthase 28
Lipoprotein modification, by advanced glycosylation endproducts 39
Liver, and thrombin-antithrombin II complexes 9
Long QT syndrome, hereditary 118
Low-density lipoprotein (LDL), and advanced glycosylation endproducts 39
Low-density lipoprotein (LDL), and thrombin- antithrombin II complexes 9
LY294002, and phosphatidylinositol 3-kinase in myogenesis 198
Lysine, and kallistatin in blood pressure regulation 307
Lysine, and plasma carboxypeptidases in plasminogen system regulation 71

M

Macrophage foam cell necrosis, in advanced atherosclerotic lesions 256
Macrophages, and protein C/protein S/thrombomodulin anticoagulant pathway 174
Magnetic resonance imaging (MRI), and arrhythmogenic right ventricular cardiomyopathy 84
Maladaptive neurohumoral responses, and animal models of heart failure 161
Malignant hyperthermia domain, in regulation of Ca^{2+} release channel 312
Marfan syndrome, molecular studies of 282
Mass density, and ultrasonography 168
Matrix proteins, and thrombin-antithrombin II complexes 9
Mechanosensitivity, and stretch-activated ion channels 4
Membrane structures, and mitochondrial diseases 16
Menopause, and cardiovascular disease 94
Metabolism, and animal models of heart failure 161
Metabolism, hormones in 264
Metabolism, and ischemia-driven angiogenesis 289
Metastasis, and thrombosis and angiogenesis in cancer 52
Microdomains, and caveolae 103
Mitochondrial diseases, advances in research 16
Molecular genetics, and idiopathic dilated cardiomyopathy 60
Molecular mechanisms, and animal models of heart failure 161
Morphogenesis, and GATA-4/5/6 in regulation of cardiac gene expression 75
Multiple pathways, of apoptosis 294
Muscle cells, and signaling pathways 151
Muscle relaxants, and malignant hyperthermia domain 312
Mutagenesis, cysteine 211
Mutations, and Bernard-Soulier syndrome 239
Mutations, and embryonic stem cell cardiogenesis 63
Mutations, and ion channel proteins 211
Mutations, and K^+ channels 118
Mutations, and mitochondrial diseases 16
Mutations, and retinoid signaling 324
Mutations, and transgenesis (Tutorial) 185
Myoblasts, and phosphatidylinositol 3-kinase in myogenesis 198
Myocardial infarction, and animal models of heart failure 161
Myocardial infarction, and mechanisensitive ion channels 4
Myocardial infarction, and ultrasonography 168
Myocytes, and congestive heart failure 249
Myocytes, and embryonic stem cell cardiogenesis 63
Myocytes, and endothelial nitric oxide synthase 28
Myocytes, and signaling pathways 151
Myogenesis, phosphatidylinositol 3-kinase in 198
Myopathies 84, and congestive heart failure 249
Myristoylation, and endothelial nitric oxide synthase 28

N

Na^+ channel, voltage-dependent 211
NADH/NADPH oxidase, and vascular fuction 301
Natural coatings, for hybrid stent 245
Necrosis, and congestive heart failure 249
Necrosis, macrophage foam cell 256
Neointimal hyperplasia, and restenosis 90
Neovascularization, genetic analysis of 271
Neovascularization, and ischemia-driven angiogenesis 289
Neural cell aggregation, and Eph family receptors and ligands 329
Neurohumoral responses, maladaptive 161
Neurotrophic factors, and apoptosis 294
Nitric oxide, and signaling pathways 151
Nitric oxide synthase, endothelial 28
Nuclear regulatory proteins, and GATA-4/5/6 in regulation of cardiac gene expression 75
Null mutant, and retinoid signaling 324
Nutrition, and retinoid signaling 324

O

Organelles, and free cholesterol-induced cytotoxicity 256
Overexpression, and phosphatidylinositol 3-kinase in myogenesis 198
Oxidative stress, and NADH/NADPH oxidase 301
Oxygen, and advanced glycosylation endproducts 39
Oxygen, and ischemia-driven angiogenesis 289

 © 1997, Elsevier Science Inc., 1050-1738/97/$17.00 PII S1050-1738(97)00118-7

Oxygen, and NADH/NADPH oxidase 301

P

p85 regulatory subunit, and phosphatidylinositol 3- kinase in myogenesis 198
Palmitoylation, and endothelial nitric oxide synthase 28
Paracrystalline incusions, and mitochondrial diseases 16
Pedigrees, and idiopathic dilated cardiomyopathy 60
Percutaneous coronary revascularization, restenosis after 245
Percutaneous transluminal coronary angioplasty, and stenting 24
Percutaneous transluminal coronary angioplasty, restenosis after 90
Perfusion, and ischemia-driven angiogenesis 289
Peripheral circulation, and animal models of heart failure 161
Permanent stents, arterial pathobiology related to use of 24
Permeability, and advanced glycosylation endproducts 39
Permeability, and thrombosis and angiogenesis in cancer 52
Phenotype, and embryonic stem cell cardiogenesis 63
Phenotype, and fibrillin-1 282
Phenotype, and malignant hyperthermia domain 312
Phenylalanine, and kallistatin in blood pressure regulation 307
Phosphatidylinositol 3-kinase, in myogenesis 198
Phospholipid transfer protein, in remodeling of plasma high density lipoproteins 218
Phospholipids, and free cholesterol-induced cytotoxicity 256
Phosphorylation, and endothelial nitric oxide synthase 28
Physiology, and retinoid signaling 324
Pituitary, growth hormone release from 264
Plaque rupture, and ultrasonography 168
Plasma, and plasminogen activator inhibitor 1 47
Plasma carboxypeptidases, and plasminogen system regulation 71
Plasma high density lipoproteins, remodeling of 218
Plasma membrane, and endothelial nitric oxide synthase 28
Plasminogen activator inhibitor 1 (PAI-1), interaction with thrombin and tissue-type plasminogen activator 47
Plasminogen activators, plasmin generation by 227
Plasminogen system, regulation of 71
Platelet endothelial cell adhesion molecule 1 (PECAM- 1/CD31), overview of 203
Platelets, and Bernard-Soulier syndrome 239
Platelets, and endothelial nitric oxide synthase 28
Platelets, and PECAM-1/CD31 203
Pluripotent cells, and embryonic stem cell cardiogenesis 63
Pneumocytes, and caveolae 103
Positive feedback response, and ischemia-driven angiogenesis 289
Positive inotropic effects, and signaling pathways 151
Posttranscriptional level, and ischemia-driven angiogenesis 289
Potocytosis, and caveolae 103
Preimplantation blastocyst, and embryonic stem cell cardiogenesis 63
Premenopause, and cardiovascular disease 94
Primary myocardial disease, and animal models of heart failure 161
Procoagulant activity, and thrombosis and angiogenesis in cancer 52
Progenitor cells, and GATA-4/5/6 in regulation of cardiac gene expression 75
Programmed cell death, and congestive heart failure 249
Promoters, and TEF transcription factors 192
Proteinase-inhibitor complexes, and thrombin- antithrombin II complexes 9
Protein C/protein S/thrombomodulin anticoagulant pathway, in allotransplantation and xenotransplantation 174
Protein trafficking, and phosphatidylinositol 3- kinase in myogenesis 198
Proteolytic network, plasminogen system as 71
Pruning, and ischemia-driven angiogenesis 289

R

Ragged-red fibers, and mitochondrial diseases 16
Reactive oxygen species, and NADH/NADPH oxidase 301
Receptors, adrenergic 137
Receptors, and apoptosis 294
Receptors, and Bernard-Soulier syndrome 239
Receptors, and Eph family and 329
Receptors, and malignant hyperthermia domain 312
Receptors, and retinoid signaling 324
Receptors, and thrombin-antithrombin II complexes 9
Receptors, and for plaminogen activators 227
Rectifier currents, and K^+ channels 118
Regeneration therapies, skeletal and cardiac muscle 198
Relaxation, endothelium-dependent 301
Remodeling, and Eph family receptors and ligands 329
Remodeling, of plasma high density lipoproteins 218
Remodeling, and restenosis 90
Respiratory chain, mitochondrial 16
Restenosis, prevention of 90, 245
Restenosis, and stenting 24
Resting membrane potential, and K^+ channels 118
Retinoid signaling, in cardiac development and physiology 324
Retinopathies, and ischemia-driven angiogenesis 289
Rhodopsin, and adrenergic receptors 137
RNA polymerase II, and TEF transcription factors 192
Ryanodine receptor, and malignant hyperthermia domain 312

S

Sarcomeric proteins, and tropomyosin 124
Sarcoplasmic reticulum, and malignant hyperthermia domain 312
Second messengers, and phosphatidylinositol 3-kinase in myogenesis 198
Secondary cardiac hypertrophy, and animal models of heart failure 161
Serine proteases, and plasminogen activator inhibitor 1 47
Serins, and thrombin-antithrombin II complexes 9
Serpins, and kallistatin in blood pressure regulation 307
SH2 domain, and Eph family receptors and ligands 329
Signaling pathways, in failing human heart muscle cells 151
Signaling pathways, retinoid 324
Signal transduction, and caveolae 103
Signal transduction, and endothelial nitric oxide synthase 28
Signal transduction, and PECAM-1/CD31 203
Signal transduction, and plasminogen activators 227
Skeletal muscle cells, and malignant hyperthermia domain 312
Skeletal muscle cells, and phosphatidylinositol 3- kinase in myogenesis 198
Smooth muscle cells, and blood vessel formation 271
Smooth muscle cells, and caveolae 103
Smooth muscle cells, and NADH/NADPH oxidase 301

© 1997, Elsevier Science Inc., 1050-1738/97/$17.00 PII S1050-1738(97)00118-7

Somatic gene delivery, and kallistatin in blood pressure regulation 307
Somatic gene transfer, strategies for 145
Sound waves, and ultrasonography 168
Sprouting, endothelial cell 271
Sprouting, and ischemia-driven angiogenesis 289
Src-tyrosine kinases, and caveolae 103
Stem cells, embryonic 63
Stem cells, and GATA-4/5/6 in regulation of cardiac gene expression 75
Stents, current status of 24
Stents, for prevention of restenosis 245
Stents, restenosis after 90
Stiffening, of lipid bilayer 256
Stress-induced angiogenesis 289
Stretch-activated ion channels, and cardiac mechanosensitivity 4
Striated muscle cells, and caveolae 103
Structure-function relationships, and transgenesis (Tutorial) 185
Suicide substrate mechanism, and plasminogen activator inhibitor 1 47
Supergene families, and K^+ channels 118
Superoxide, and NADH/NADPH oxidase 301
Systemic diseases, and congestive heart failure 249

T

Targeting, and Eph family receptors and ligands 329
Targeting, and GATA-4/5/6 in regulation of cardiac gene expression 75
Targeting, vascular 329
TEA DNA-binding domain, and TEF transcription factors 192
TEF transcription factors, overview of 192
Temporary stents, arterial pathobiology related to use of 24
Teratogenicity, and retinoid signaling 324
Terminal differentiation, and GATA-4/5/6 in regulation of cardiac gene expression 75
TF-F.VIIA complex, and tissue factor-dependent coagulation 316
Thinning, of left ventricle 249
Thrombin, and plasminogen activator inhibitor 1 47
Thrombin-antithrombin II complexes, cellular uptake mechanisms of 9
Thrombosis, and angiogenesis in cancer 52
Thrombosis, and stenting 24, 245
Thrombosis, and tissue factor-dependent coagulation 316
Thrombospondin, and thrombosis and angiogenesis in cancer 52
Tissue factor-dependent coagulation, molecular and structural advances in 316
Tissue factor pathway inhibitor, and endocytosis 234
Tissue rescue, during ischemia 271
Tissue-type plasminogen activator (tPA), plasmin generation by 227
Tissue-type plasminogen activator (tPA), and plasminogen activator inhibitor 1 47
T lymphocytes, and apoptosis 294
trans-activators, ligand-dependent 324
Transcriptional control, and GATA-4/5/6 in regulation of cardiac gene expression 75
Transcriptional control, and ischemia-driven angiogenesis 289
Transcytosis, endothelial 103
Transgenesis, altering cardiac function via (Tutorial) 185
Transgenic mice, and adrenergic receptors 137
Transgenic mice, and blood vessel formation 271
Transgenic mice, and gene transfer strategies 145
Transgenic mice, and in vivo echocardiographic assessment of left ventricular function in 129
Transgenic mice, and kallistatin in blood pressure regulation 307
Transgenic mice, and tropomyosin 124
Transient outward current, and K^+ channels 118
Transmembrane ligands, Eph family receptors 329
Tropomyosin, structure and function of 124
Troponin, tropomyosin interaction with 124
Tumor necrosis factor (TNF), and Eph family receptors and ligands 329
Tumors, and blood vessel formation 271
Tumors, and ischemia-driven angiogenesis 289
Tumors, and thrombosis and angiogenesis in cancer 52
Tyrosine kinases, Eph family 329

U

Ultrasonography, in high-resolution imaging of cardiovascular system 168
Up-regulation, and ischemia-driven angiogenesis 289
Up-regulation, and transgenesis (Tutorial) 185
Urokinase-type plasminogen activator (uPA), plasmin generation by 227

V

Valvular heart disease, and animal models of heart failure 161
Vascular endothelial growth factor (VEGF), and ischemia-driven angiogenesis 289
Vascular endothelial growth factor (VEGF), and thrombosis and angiogenesis in cancer 52
Vascular function, and NADH/NADPH oxidase 301
Vascular wall, and advanced glycosylation endproducts 39
Vasculopathy, diabetic 271
Vasorelaxation, endothelium-dependent 28
Ventricular muscle cells, and signaling pathways 151
Ventricular overload, with secondary cardiac hypertrophy 161
Vessel injury, and Bernard-Soulier syndrome 239
Vessel-wall biology, plasminogen activators in 227
Visceral fat mass, and growth hormone 264
Vitronectin, and plasminogen activators 47, 227
Voltage dependence, and Na^+ channel 211

W

Whole body growth, hormones in 264
Wild-type, and ion channel proteins 211
Wortmannin, and phosphatidylinositol 3-kinase in myogenesis 198
Wound healing, and blood vessel formation 271

X

Xenotransplantation, protein C/protein S/thrombomodulin anticoagulant pathway in 174

Y

Young people, and arrhythmogenic right ventricular cardiomyopathy 84
